PORTFOLIO

yoavmayer.github.io

Innovative AI & agent projects, live.

SKILLS

Programming

C# (.NET 8, .NET Framework) - primary; Python; TypeScript; Java

AI & Agentic Stack

AI-assisted development in Anthropic Claude (Claude Code), Cursor, ChatGPT daily since 2025; prompt engineering; LLM / agent integration; multi-agent orchestration; LLM ops & token-cost auditing; AI agent observability; TypeScript / Next.js; Server-Sent Events

DevOps

Git / GitHub, Azure DevOps CI/CD, Docker, Azure Functions, Azure Storage, semantic versioning (NuGet / Artifacts)

Integration & Protocols

9 communication protocols designed (BLE, NFC, gRPC, RS232, LoRa, Cat-M, Modbus, M-Bus, WMBus); REST / OpenAPI; MongoDB

Test Automation

Hardware-in-the-loop (HIL) automation, NUnit, Ranorex, Robot Framework, UiPath

EDUCATION

B.Sc. Information Systems

Haifa University | 2011 - 2015

MILITARY SERVICE

Armored Corps, IDF

2005 - 2008

LANGUAGES

Hebrew (Native), English (Fluent)

PROFESSIONAL SUMMARY

AI developer with a decade of production C# / .NET (.NET 8, .NET Framework) and Python, now building AI-agent tooling end to end: an npm-published agent-observability dashboard and daily AI-assisted development in Anthropic Claude (Claude Code) - prompt engineering and LLM / agent integration - all delivered through Git / GitHub. Designs distributed microservices, multi-protocol integrations, and CI/CD; led delivery 2019 - 2026 as Tech Lead, then Project Manager / Scrum Master.

EXPERIENCE

Independent AI Engineer - Agentic Systems

03/2026 - Present

Self-directed independent work

- Shipped a real-time observability dashboard for AI-agent orchestration (TypeScript / Next.js, Server-Sent Events); published on npm ([@yoavmayer/babysitter-observer-dashboard](https://github.com/yoavmayer/babysitter-observer-dashboard)) with real external users.
- Operate fully autonomous agentic ops pipelines: nightly self-driving LLM-orchestrated runs (cron + multi-agent workflows on Claude Code) that finalize and deploy a live production web app unattended.
- Built multi-agent workflow systems and LLM token-cost audit tooling, used daily across a fleet of active projects.

Automation & SW Infrastructure Team Leader, R&D

2018 - 03/2026

Arad Technologies

- Tech Lead from 2019, then Project Manager / Scrum Master; managed and mentored 5 engineers and subcontractors.
- Arad Tuner:** distributed microservices water-meter calibration platform (ASP.NET Core Web API, gRPC core, BLE bridge servers, per-meter device agents, MongoDB, Docker); brought up a new production line in Dalia.
- Built and shipped 40+ internal NuGet packages on a private Azure DevOps Artifacts feed under semantic versioning, used across the org.
- LabTester:** hardware-in-the-loop NUnit test framework (Otii power profiling, Phidgets, RF / BLE / LoRa / serial / gRPC); authored its abstract / interface base classes; automated 90%+ of regression with CI/CD.
- Led the full Azure DevOps migration (repositories, CI/CD pipelines, Scrum delivery) and the department's .NET 8 infrastructure upgrade.

Automation Engineer, R&D

2014 - 2018

Arad Group

- Developed a Python / OpenCV image-recognition system for LCD quality assurance; led the SVN-to-Azure DevOps migration of automation frameworks and repositories.
- Created C# automation systems (Ranorex) and APIs that bypass the product UI for testing, removing test bottlenecks.

Software Developer

2014 - 2015

Arad Ltd.

- Engineered C# factory testing tools with graphical reporting for the production line.

SELECTED AI & AGENT PROJECTS

- podcast-intel** - Python NLP pipeline: Whisper transcription, speaker diarization, and a 39-metric scoring model. github.com/YoavMayer/podcast-intel.
