Yoav Mayer

AI Engineer | Agent Tooling and LLM Applications | .NET Team Leader

yoavmayer@gmail.com · 054-6368400 · yoavmayer.github.io · github.com/YoavMayer · linkedin.com/in/yoavmayer

SUMMARY

Built agent tooling and LLM integrations on top of a decade of production C#/.NET behind industrial devices and the test systems around them. Independent since 2/2026, building AI-powered applications with Claude that reached real users. The observer dashboard I built for a 1.5k+ star open-source agent framework is published on npm, and the project lists it in its hall of fame.

KEY HIGHLIGHTS

- Multiple applications built on Claude and LLM APIs since going independent, two of them public on GitHub and npm.
- Led a five-engineer infrastructure team for eight years, including its move off SVN and the CI/CD pipelines that followed.
- A calibration platform built from scratch on .NET and gRPC, with the calibration logic brought in-house off the subcontractor's tooling.

EXPERIENCE

Automation & SW Infrastructure Team Leader, R&D · Arad Technologies

2018 - 2/2026

- Architected a .NET calibration platform from scratch, test-bench to live production line: an ASP.NET Core REST API with gRPC/BLE bridge servers. It moves the core calibration data into an in-house middle layer, off the subcontractor's tooling and the meter firmware, so a change to a meter no longer forces a subcontractor release.
- Built the end-to-end test automation in C# and wired it into the firmware team's development cycle.
- Led five engineers and subcontractors, and owned the R&D department's shared .NET tooling: a private NuGet ecosystem of more than 40 packages used across the org.
- Established the team's DevOps on Azure DevOps: migrated the codebase from SVN to Git and set up the CI/CD pipelines.
- Designed the communication layer between the C# side and the devices, from the factory floor to meters deployed in the field: Modbus, M-Bus and WMBus in the field, BLE, NFC and RS232 on the bench and the production line.
- Ran the R&D document-management project on SharePoint and Azure DevOps Wiki, automating its document workflows with Power Automate and Azure Functions.
- Supported and maintained that software with its users throughout: production engineers, subcontractors and other engineering functions across the organization.

Automation Engineer, R&D · Arad Group

2014 - 2018

- Worked directly with clients and subcontractors on their requirements, then built the integrations on their own setups.
- Developed a Python/OpenCV image-recognition system for LCD quality assurance on the QA line, and C# API layers that let the test suites drive the product directly, bypassing the UI.

SELECTED PROJECTS

babysitter observer dashboard · npmjs.com/package/@yoavmayer/babysitter-observer-dashboard

A TypeScript/Next.js observability and step-gating dashboard for the babysitter agent framework: it shows each Claude/LLM agent run live and lets a human approve or block each step.

podcast-intel · github.com/YoavMayer/podcast-intel

I love the football and I love the podcast, so I built podcast-intel around it in Python. Every new episode becomes transcripts, speaker labels, a quality score and a briefing before the next show; a Telegram bot on top answers questions from those transcripts, citing the passages it retrieves rather than anything the model made up. BGE-M3 embeddings, ChromaDB, a reranker and Claude sit underneath a 200+ episode corpus.

Reserves operations app

Co-built the AI-powered web app that replaced a reserve unit's call-up, availability and duty-roster spreadsheets. Next.js on Vercel, Supabase/Postgres, in trial use with the unit. Private repo.

SKILLS

AI: Claude / LLM integration, AI-agent tooling and observability, Human-in-the-loop approval of agent runs, RAG (embeddings + vector search + LLM), Whisper transcription and speaker diarization, Development with Claude Code and Cursor

Languages: Python, C# / .NET 8 & Framework, TypeScript / Next.js

Data: SQL Server, MongoDB, Supabase / Postgres, SQLite

Protocols: gRPC, REST APIs, BLE, NFC, RS232, Modbus, M-Bus, WMBus, LoRa, Cat-M

Automation: Hardware-in-the-loop test automation, Ranorex, UiPath, Testing Anywhere, Robot Framework

Cloud / DevOps: Vercel, GitHub, Docker, CI/CD, Azure DevOps

Practices: Software architecture, Debugging, Agile, Scrum

MILITARY SERVICE

Armored Corps, IDF, 2005-2008
Reserve Service, 2009-2026

LANGUAGES

Hebrew (Native), English (Fluent)

EDUCATION

B.Sc. Information Systems, Haifa University, 2011-2015
